

Cloud Backup for Small Business

Automated backups, fast recovery of vital data...without adding IT resources.

Overview

No matter what the cause, data loss can sometimes bring a business to its knees. Cloud Backup for Small Business – brought to you by ExoNetworkx – delivers a secure, reliable and cost-effective way to protect against data loss with seamless, automated backups. Mission-critical data is safely protected and stored off-site and, in the event of data loss, Cloud Backup speeds recovery to ensure your business stays up and running. Without an expensive in-house solution to support, you can truly focus on the business while we protect your data.

Affordable, Efficient Data Protection

Ideal for small and mid-sized organizations that want to ensure the security of their mission-critical data, Cloud Backup requires no investment in hardware, software or the IT resources needed to maintain an in-house backup solution. Not only does this reduce costs, it increases productivity by keeping you focused on higher priority projects that more directly impact the core business.

Fast, Automated Backup & Recovery

Cloud Backup for Small Business provides secure online backup and fast recovery for Windows Server, Microsoft Exchange Server, Microsoft SQL Server and workstations running Windows or Mac OSX operating systems to ensure business continuity in case of data loss.

Schedule uncapped or incremental high-speed backups of servers and workstations to automatically run daily, weekly or monthly—or customize the schedule to your specific business needs. You can also manage bandwidth as needed for greater throughput and reliability.

Recovering files is as easy as selecting the file or folder to restore and downloading it. Data is open, reusable, indexed and searchable for fast recovery, and can be accessed anytime, anywhere and from any device. Even restore older versions of files that have been backed up multiple times. In case of a major disaster, you can choose a recovery method that best suits your needs—via server application, Web console or global express shipment.

Secure, reliable and cost-effective Cloud Backup protects vital data and ensures fast recovery—without the costs associated with an on-site solution.

Key Benefits

- ✓ High-speed, automated backups
- ✓ Predictable IT expenses
- ✓ Easy bandwidth management
- ✓ Military-grade security
- ✓ Self-service management
- ✓ Multiple file versioning
- ✓ 24/7/365 recovery and support
- ✓ Multiple recovery options

Military-Grade Data Security

Cloud Backup uses advanced data security to ensure that your valuable business data is protected. Data is compressed and encrypted at the source using 448-bit encryption, then transferred to/from the source within a highly secure SSL connection before being stored in SAS 70 Compliant, Tier 3+ datacenters. No physical transportation of data is required. These stringent measures reduce the risk of data loss due to theft, error or disaster.

Simple Setup & Administration

Setting up and administering Cloud Backup couldn't be any easier. Simply download the server client, choose which files to back up and define how to manage data/bandwidth throttling. With just a few clicks, files—even open files—are automatically backed up. The self-service management console allows you to easily manage backup configurations and schedules, user accounts, access policies and reporting. And if you ever need backup, our dedicated support and data recovery specialists are available 24/7/365 to give you a hand.

Key Benefits

- Subscribe to services on a monthly basis to maximize resources and better control IT costs.
- Receive up to 400GB of pooled storage across an unlimited number of servers for enterprise-class backup flexibility.
- Use a secure, easy-to-use Web-based portal for simplified administration and configuration.
- Schedule automated daily, weekly or monthly backups—or customize a schedule that meets specific business needs.
- Choose uncapped or incremental backups to reduce storage space and bandwidth requirements.
- Easily manage backup configurations, backup schedules, access policies, user accounts and reporting via a self-service Web console.
- Ensures your business-critical data is protected—from the source to the backup server—by securely compressing, encrypting and storing data in SAS 70 Compliant, Tier 3+ data centers.
- Quickly recover files—anywhere, anytime and from any device—with a few simple clicks or, in case of a disaster, choose from multiple recovery methods to get back in business fast.
- Get complete flexibility by restoring older versions of files, even if they've been backed up several times since.
- Count on a dedicated and expert support and recovery team that provides 24/7/365 backup.

ExoNetworkx Inc.

Since 2003, ExoNetworkx has been a trailblazer in delivering IT resources in an easy and consumable format.

Today that format is known as a CLOUD service and it is all about using and paying for resources as you need them with the knowledge that it is being done better and cheaper than if you did it in-house.

ExoNetworkx is the NEW utility you can subscribe to - Consume what you need when you need it with no long-term obligations or hidden costs. From pre-packaged SW solutions to providing a highly reliable, scalable, low-cost infrastructure platform in the cloud.

We understand these challenges and that is why we are 100% focused on IT infrastructure services so you can focus on what matters to you – strong business results.
