

Web Hosting for Enterprise

powered by Amazon Web Services (AWS)

Highly available, enterprise web hosting that removes operational burdens and lowers costs.

Overview

ExoNetworkx Web Hosting for Enterprise, powered by Amazon Web Services (AWS), allows you to completely control your computing resources within a secure, highly available, enterprise-class Web hosting environment, provided by AWS. These Linux-based services support DMZ, presentation, application and database tiers.

Obtain and boot new server instances in minutes, and quickly scale capacity up or down as your computing requirements change. With predictable monthly expenses and little to no maintenance, you can cut costs by 40-60% when compared to an on-premise web infrastructure—making Web-scale computing more affordable for you and easier for developers.

Easy, On-Demand Web Hosting Environment

Whether you're looking to host your company website, build a Web storefront or deliver Web-based database applications, ExoNetworkx Web Hosting for Enterprise provides a low-cost, pre-built cloud infrastructure specifically for hosting high traffic, large scale websites.

Getting started is easy and, once you've subscribed, allows you to access a full load-balanced multi-datacenter Web farm. A simple Web service interface allows you to easily obtain and configure capacity. Just set the administrative client to securely access your Linux servers and start loading the Web application. Soon, you'll be supporting up to 100,000 concurrent users and millions of page views, and developers will have all the tools needed to build failure-resilient applications.

Highly Available, Dynamically Scalable

With a fully scalable, highly available production Web hosting environment, ExoNetworkx Web Hosting for Enterprise leverages Amazon's Elastic Compute Cloud (EC2) to deliver resizable compute capacity within minutes. Configure one, hundreds or even thousands of server instances simultaneously. With Web service APIs, your application can dynamically scale itself up during demand spikes to maintain performance or down during lulls to minimize costs—especially beneficial for critical applications with hourly, daily or weekly usage variability.

This highly redundant environment, based on industry best practices, also insulates you from common failure scenarios. Its single Region, multi-Availability Zone active/active configuration allows an entire Availability Zone to fail and the infrastructure will still process production loads. This low-cost, low latency failover to other Availability Zones helps to ensure 99.95% availability.

Key Benefits

- ✓ Easy-to-use self-service portal
- ✓ 99.99% end-to-end availability
- ✓ Drag-and-drop provisioning
- ✓ Massive scalability
- ✓ Pay-per-use cost model
- ✓ Complete enterprise DC services
- ✓ Multi-tiered service profiles
- ✓ 24/7/365 single-contact support

Comprehensive, World-Class Security

ExoNetworkx Web Hosting for Enterprise leverages stringent measures to completely protect the confidentiality, integrity and availability of your systems and data. The easy-to-use Web service interface allows you to configure firewall settings so you can control network access to and between groups of instances. You can also isolate instances by specifying the IP range you wish to use, and connect to your existing IT infrastructure using industry-standard encrypted IPsec VPN. Even launch dedicated instances for added isolation.

Integrated Monitoring & Reporting

ExoNetworkx Web Hosting for Enterprise offers a complete view of your infrastructure and its performance. Monitor cloud resources and applications for greater visibility into resource utilization, operational performance and overall demand patterns. Get statistics, view graphs and set alarms for metric data, including CPU utilization, disk reads and writes, network traffic or other metrics that you supply. Just select the instances you want to monitor and you're on your way.

Affordable, Flexible Options to Meet Your Needs

ExoNetworkx Web Hosting for Enterprise takes care of managing everything—from the host operating system and virtualization layer down to physical facility security—relieving you of any operational burdens and allowing you to focus on more strategic projects related to your core business. And with an off-premise Web infrastructure, you can lower costs by as much as 60% over and in-premise solution.

Choose from the package that best meets your needs: Small (10,000 concurrent users), Medium (50,000 concurrent users) or Large (100,000 concurrent users). All packages include at least 1TB of storage, but additional storage can be purchased on any tier for more about content websites and databases.

Key Benefits

- Predictable Costs – Subscribe on a monthly basis to maximize resources and better control IT costs.
- Highly Available – Rely on a single Region, multi-Availability Zone active/active configuration for 99.95% availability.
- Increased Productivity – Removes operational burdens, allowing you to focus on higher priority projects related to your core business.
- Enterprise-Class Security – Ensures your confidentiality, as well as complete protection and integrity of your systems and data.
- Immensely Scalable – Delivers resizable compute capacity in minutes, so you can configure thousands of server instances simultaneously.
- Comprehensive Reporting – Monitor cloud resources and applications for greater visibility into resource utilization, operational performance and overall demand patterns.
- Flexible Options – Choose a package that best meets your needs—from 10,000 concurrent users to 100,000.
- 24/7/365 Support – Count on an expert support team that provides 24/7/365 assistance as needed

ExoNetworkx Inc.

Since 2003, ExoNetworkx has been a trailblazer in delivering IT resources in an easy and consumable format.

Today that format is known as a CLOUD service and it is all about using and paying for resources as you need them with the knowledge that it is being done better and cheaper than if you did it in-house.

ExoNetworkx is the NEW utility you can subscribe to - Consume what you need when you need it with no long-term obligations or hidden costs. From pre-packaged SW solutions to providing a highly reliable, scalable, low-cost infrastructure platform in the cloud.

We understand these challenges and that is why we are 100% focused on IT infrastructure services so you can focus on what matters to you – strong business results
